

FBM215 HART® Communication Output Interface Module

The FBM215 HART® Communication Output Interface Module offers eight output channels, each providing a 4 to 20mA output signal or a digital HART signal superimposed on a 4 to 20 mA analog output signal.

FEATURES

Key features of the FBM215 module are:

- ▶ Eight channel-isolated output channels, each providing one of the following outputs:
 - Standard 4 to 20 mA analog output signal
 - Digital HART Frequency Shift Keying (FSK) signal superimposed on a 4 to 20 mA analog output signal.
- ▶ FSK modem dedicated to each output channel for bi-directional digital communications with a HART field device
- ▶ Galvanic isolation of all output channels from each other, and from ground and module logic
- ▶ Support for HART universal commands necessary to interface the field device with the I/A Series® system database
- ▶ Compact, rugged design suitable for enclosure in Class G3 (harsh) environments
- ▶ Termination Assemblies (TAs) for locally or remotely connecting field wiring to the FBM215.

OVERVIEW

The HART Communication Output Interface Module (FBM215) contains eight channel-isolated output channels. The FBM215 supports any mix of standard 4 to 20 mA devices and HART devices.

The FBM215 serves as a HART communications field device host, enabling the I/A Series system to request and receive two digital messages per second from each field device. The message pass-through capability can be used to support HART universal, common practice, and device-specific commands, but not the burst communication mode. These commands are implemented using the Intelligent Field Device Configurator (IFDC — refer to PSS 21S-8A3 B3 for details).

The FBM215 provides an isolated power supply for each channel.

When connected to the appropriate TAs, the FBM215 module provides functionality formerly provided by the 100 Series FBM I/O subsystem. TAs are available which support the functionality of the 100 Series FBM37 when the FBM37 is used with HART devices.

COMPACT DESIGN

The FBM215 has a compact design, with a rugged extruded aluminum exterior for physical protection of the circuits. Enclosures specially designed for mounting the FBMs provide various levels of environmental protection, up to harsh environments per ISA Standard S71.04.

VISUAL INDICATORS

Light-emitting diodes (LEDs) incorporated into the front of the module provide visual indication of the module's operational status, and communication activity of the channels.

EASY REMOVAL/REPLACEMENT

The module can be removed/replaced without removing field device termination cabling, power, or communications cabling.

FIELD BUS COMMUNICATION

A Fieldbus Communication Module or a Control Processor interfaces the redundant 2 Mbps module Fieldbus used by the FBMs. The FBM215 module accepts communication from either path (A or B) of the redundant 2 Mbps fieldbus — should one path fail or be switched at the system level, the module continues communication over the active path.

MODULAR BASEPLATE MOUNTING

The module mounts on a modular baseplate, which accommodates up to four or eight FBMs. The modular baseplate is either DIN rail mounted or rack mounted, and includes signal connectors for redundant fieldbus, redundant independent dc power, and termination cables.

TERMINATION ASSEMBLIES

Field output signals connect to the FBM subsystem via DIN rail mounted TAs. The TAs used with the FBM215 are described in "TERMINATION ASSEMBLIES AND CABLES" on page 7.

FUNCTIONAL SPECIFICATIONS

Field Device Channels

SUPPORTED HART INSTRUMENT TYPES

HART instruments compliant to Version 5, 6, or 7 of the HART specifications may be used

INTERFACE

8 isolated output channels

COMMUNICATIONS TO THE DEVICE

Point-to-point, master/slave, asynchronous, half-duplex, at 1200 baud

ERROR CHECKING

Parity on each byte, and one CRC check byte on each message

SPEED

2 messages per second

FASTEST ALLOWED ECB BLOCK PERIOD

100 msec - However, it is recommended that you refer to the *Sizing Guidelines and Excel Workbook* appropriate for your Control Processor to determine the optimal loading for a 100 msec Block Processing Cycle (BPC).

MAXIMUM DISTANCE (FBM215 TO FIELD DEVICE)

Meets HART FSK physical layer specification HCF_SPEC-54, Revision 8.1 [up to 3030 m (10000 ft)]⁽¹⁾

CURRENT OUTPUTS

Analog Accuracy (Includes Linearity)

±0.05% of span (between 4 mA and 20 mA)

Output Load

750 Ω maximum

Maximum Rate of Change

20 mA in 60 milliseconds

Resolution

13 bits

LOOP POWER SUPPLY PROTECTION

Each channel is channel-to-channel galvanically isolated, current limited, and voltage regulated. All analog outputs are limited by their design to about 25 mA. If the output FET shorts, the output current could increase up to 100 mA.

In normal operation the FBM outputs a constant current into a 0 to 750 ohm load.

ISOLATION

The channels are galvanically isolated (both optical and transformer isolation) from each other, and from ground and module logic. The module withstands, without damage, a potential of 600 V ac applied for one minute between the isolated channels and earth (ground).

CAUTION

This does not imply that these channels are intended for permanent connection to voltages of these levels. Exceeding the limits for input voltages, as stated elsewhere in this specification, violates electrical safety codes and may expose users to electric shock.

Fieldbus Communication

Communicates with its associated FCM or FCP via the redundant 2 Mbps module Fieldbus

Power Requirements

INPUT VOLTAGE RANGE (REDUNDANT)

24 V dc ±5%

CONSUMPTION

7 W (maximum)

HEAT DISSIPATION

5 W (maximum)

Calibration Requirements

Calibration of the module and termination assembly is not required.

(1) The maximum allowable distance decreases when the loop is operated through an intrinsic safety barrier. The maximum distance of the field device from the FBM is a function of compliance voltage (19 V dc at 20.4 mA), wire and load resistance, and voltage drop at the field device.

FUNCTIONAL SPECIFICATIONS (CONTINUED)

Regulatory Compliance

ELECTROMAGNETIC COMPATIBILITY (EMC)

European EMC Directive 89/336/EEC

Meets: EN 50081-2 Emission standard
EN 50082-2 Immunity standard

Suitable for use in Class G3 (Harsh) environments as defined in ISA Standard S71.04, based on exposure testing according to EIA Standard 364-65, Class III.

Vibration

7.5 m/S² (0.75 g) from 5 to 500 Hz

(2) The environmental limits of this module may be enhanced by the type of enclosure containing the module. Refer to the applicable Product Specification Sheet (PSS) which describes the specific type of enclosure that is to be used.

PHYSICAL SPECIFICATIONS

Mounting

MODULE

The FBM215 mounts on a modular baseplate. The baseplate can be mounted on a DIN rail (horizontally or vertically), or horizontally on a 19-inch rack using a mounting kit. Alternatively, FBM215 mounts on a 100 Series conversion mounting structure. Refer to *DIN Rail Mounted Modular Baseplates* (PSS 21H-2W6 B4) or *100 Series Conversion Mounting Structures* (PSS 21H-2W8 B4) for details.

TERMINATION ASSEMBLY

The TA mounts on a DIN rail and accommodates multiple DIN rail styles including 32 mm (1.26 in) and 35 mm (1.38 in).

TERMINATION ASSEMBLIES AND CABLES

Field output signals connect to the FBM subsystem via DIN rail mounted Termination Assemblies, which are **electrically passive**. TAs for the FBM215 are available in the following forms:

- ▶ Compression screw type using Polyvinyl Chloride (PVC) or Polyamide material
- ▶ Ring lug type using PVC material.

See the following “FUNCTIONAL SPECIFICATIONS – TERMINATION ASSEMBLIES” for a list of TAs used with the FBM215.

The FBM215 provides sufficient loop resistance to allow use of the HART Hand-Held Terminal, or PC20 Intelligent Field Device Configurator (PSS 2A-1Z3 E).

A removable termination cable connects the DIN rail mounted TA to the FBM via a field connector on the baseplate in which the FBM is installed. Termination cables are available in the following materials:

- ▶ Polyurethane
- ▶ Low Smoke Zero Halogen (LSZH).

Termination cables are available in a variety of lengths, up to 30 meters (98 feet), allowing the Termination Assembly to be mounted in either the enclosure or in an adjacent enclosure. See Table 2 for a list of termination cables used with the TAs for the FBM215.

FUNCTIONAL SPECIFICATIONS – TERMINATION ASSEMBLIES

| FBM Type | Output Signal | TA Part Number | TA Part Number | Termination | TA Cable | TA Certification |
|----------|---|--------------------|-------------------|---------------------|---------------------|---------------------|
| | | PVC ^(a) | PA ^(a) | Type ^(b) | Type ^(c) | Type ^(d) |
| FBM215 | 8 output channels, 4 to 20 mA analog signal, alone or with HART signal superimposed | P0917XV P0926EK | P0926SP | C RL | 1 | 1, 2 |

- (a) PVC is polyvinyl chloride rated from -20 to +50°C (-4 to +122°F). PA is polyamide rated from -20 to +70°C (-4 to +158°F).
 (b) C = TA with compression terminals; RL = TA with ring lug terminals.
 (c) See Table 2 for cable part numbers and specifications.
 (d) See Table 1 for Termination Assembly certification definitions.

Table 1. Certification for Termination Assemblies

| Type | Certification ^(a) |
|--------|---|
| Type 1 | TAs are UL/UL-C listed as suitable for use in Class I; Groups A-D; Division 2 temperature code T4 hazardous locations. They are CENELEC (DEMKO) certified EEx nA IIC T4 for use in Zone 2 potentially explosive atmospheres. |
| Type 2 | TAs are UL/UL-C listed as associated apparatus for supplying non-incendive field circuits Class I; Groups A-D; Division 2 hazardous locations when connected to specified DIN rail mounted FBMs and field circuits meeting entity parameter constraints specified in <i>DIN Rail Mounted Subsystem User's Guide</i> (B0400FA). They are also CENELEC (DEMKO) certified as associated apparatus for supplying field circuits for Group IIC, Zone 2 potentially explosive atmospheres. Field circuits are also Class 2 limited energy (60 V dc, 30 V ac, 100 VA or less) if customer-supplied equipment meets Class 2 limits. |

(a) All TAs are UL/UL-C listed to comply with applicable ordinary location safety standards for fire and shock hazards. Hazardous location types comply with ATEX directive for II 3 G use. They also comply with the requirements of the European Low Voltage Directive. All listings/certifications require installation and use within the constraints specified in *DIN Rail Mounted Subsystem User's Guide* (B0400FA) and the conditions stated in UL and DEMKO reports.

Table 2. Cables Types and Part Numbers

| Cable Length m (ft) | Type 1 P/PVC ^(a) | Type 1 LSZH ^(b) | Type 1 H/XLPE ^(c) |
|------------------------|--------------------------------|-------------------------------|---------------------------------|

| 30.0 (98.4) | P0916DJ | P0928AK | P0916VJ |

(a) P/PVC is polyurethane outer jacket and semi-rigid PVC primary conductor insulation.

(b) Low smoke zero halogen or low smoke free of halogen (LSZH) is a material classification used for cable jacketing. LSZH is composed of thermoplastic or thermoset compounds that emit limited smoke and no halogen when exposed to high sources of heat. Temperature range: -40 to +105°C (-40 to +221°F)

(c) H/XLPE is Hypalon outer jacket and XLPE (cross-linked polyethylene) primary conductor insulation. Temperature range: -40 to +90°C (-40 to +194°F). Hypalon cables are no longer available for purchase.

Migration Use of Termination Assemblies

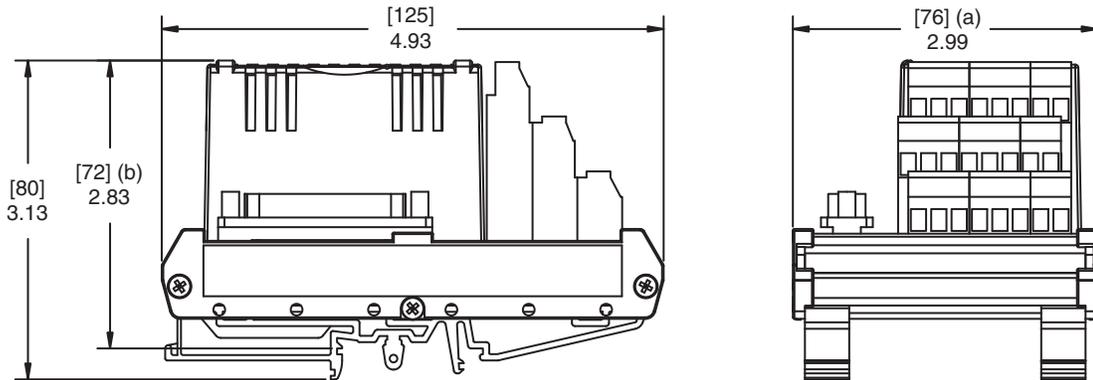

When an FBM215 is used to replace the 100 Series FBM37, it may use any of the appropriate termination assemblies listed above for the FBM37's field I/O wiring.

Alternatively, the FBM215 can accept this field wiring through a Termination Assembly Adapter (TAA) instead of a termination assembly. This is discussed in *Termination Assembly Adapter Modules for 100 Series Upgrade* (PSS 21H-2W4 B4).

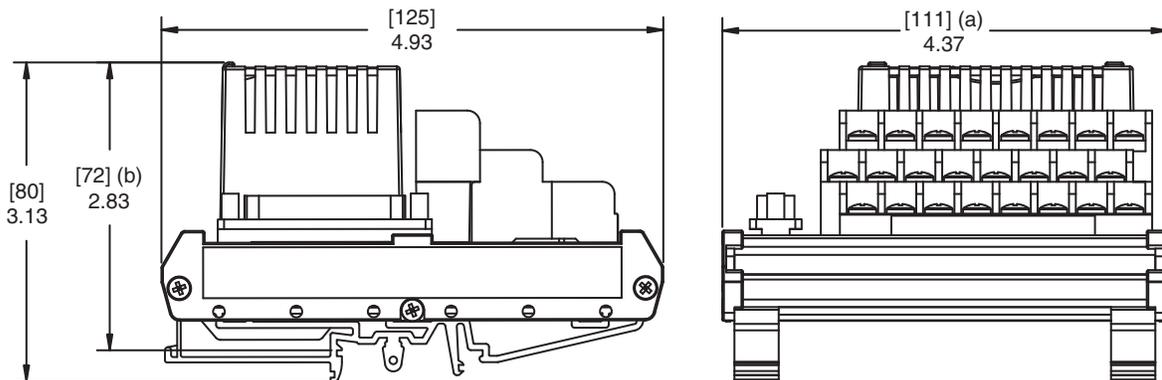

DIMENSIONS – NOMINAL

[mm]
in

Compression Termination Assembly
