

Thin Clients

HP Dual Monitor Thin Client

HP Quad Monitor Thin Client

The HP® thin clients can be used in traditional and virtualized I/A Series systems.

FEATURES

The HP® thin clients:

- ▶ Serve as a human to machine interface (HMI) station for remote connections to remote servers running Microsoft® Remote Desktop Services (formally known as Terminal Services).
- ▶ Are supported for systems at:
 - I/A Series software v8.8 and later
 - FCS 4.0 and later.
- ▶ Can establish connections to:
 - A Model H90 or H91 server running Microsoft® Windows Server® 2008 R2 Standard operating system.
 - A virtual machine running on an I/A Series V90 server virtualization host.
- ▶ Can be configured for connections to a specific remote server or multiple remote servers simultaneously.
- ▶ Support the following:
 - Up to four monitors
 - Touchscreen monitors
 - A local USB color printer.
- ▶ Are designed to be mounted locally to their user.
- ▶ Communicate with the I/A Series system through an off-Mesh network called the DCS Auxiliary Communications Network (ACN).

OVERVIEW

Thin clients are physical hardware terminals with a compact form factor which are capable of operating software via a remote connection to a remote server through the use of Microsoft Remote Desktop Services (formally known as Terminal Services). Invensys has qualified two versions of HP® thin clients for use with the I/A Series system.

Thin client versions available:

- ▶ HP Dual Monitor Thin Client (P0928FY) - with support for up to two monitors via one DisplayPort 1.1a video port plus one DVI-I video port
- ▶ HP Quad Monitor Thin Client (P0928FZ) - with support for up to four monitors via one DisplayPort 1.1a video port plus three DVI-I video ports

Thin clients support a mouse, an optional trackball (purchased separately), an alphanumeric keyboard, 23-inch flat panel LCD monitor (purchased separately), an optional USB touchscreen (purchased separately with the monitor), an optional USB printer (purchased separately) and an optional USB speaker set (purchased separately). Additionally, thin clients support an external USB DVD drive (purchased separately) which is required for installing the thin client image.

NOTE

The thin clients do not support the serial/GCIO annunciator keyboard. Currently, the thin clients also do not support the USB annunciator keyboard. However thin clients do support the use of FoxPanels which can be used as an alternative to an annunciator keyboard.

Thin clients can be used to operate I/A Series software or Foxboro Control Software (FCS), as well as third-party software or user-written applications. Supported thin client use cases include connections to two different types of remote servers:

- ▶ A Model H90 or H91 server running Microsoft Windows Server 2008 R2 Standard operating system.
- ▶ A virtual machine running on an I/A Series V90 server virtualization host.

Thin clients communicate with the I/A Series system through a DCS Auxiliary Communications Network (ACN) via a single 1 GB copper Ethernet. The DCS ACN is a 1 GB off-Mesh network comprised of managed Ethernet switches that must not share any of the same network hardware (switches) with The Mesh control network. Thin Clients are required to use the DCS ACN for communication to the I/A Series system in order to prevent visualization traffic from adversely affecting the control communication on The Mesh control network.

CONFIGURATIONS

Thin clients may be set-up in one of the following configurations:

- 1** A configuration in which a specific thin client is restricted to connect to one particular virtual machine, or one physical (supported) I/A Series server.
- 2** A configuration in which a specific thin client is connected automatically to only one particular virtual machine, or one physical (supported) I/A Series server when the thin client boots up.
- 3** A configuration in which a specific thin client has the option to connect to one of several different virtual machines, and/or physical (supported) I/A Series servers.

- 4 A configuration in which a specific thin client has the option to connect to multiple virtual machines and/or multiple physical (supported) I/A Series servers simultaneously.
- 5 A configuration in which a specific thin client is connected automatically to multiple virtual machines and/or multiple physical (supported) I/A Series servers simultaneously when the thin client boots up.

-sizing

A single remote server running Microsoft Remote Desktop Services can support up to twenty simultaneous remote sessions simultaneously. Therefore, if a thin client is only using one remote session, then a single remote server can support up to twenty thin clients.

However, there is a limit to the number of remote sessions that can be supported simultaneously by a V90 server virtualization host - though each individual virtual machine can support up to twenty simultaneous remote sessions, collectively the V90 server virtualization host cannot support more than 40 simultaneous remote sessions due to bandwidth constraints of the V90's physical Ethernet ports.

SECURITY

Thin clients can be configured to restrict connections to remote servers. Refer to "CONFIGURATIONS" on page 2 regarding which configurations are permitted. Once a thin client establishes a connection with a remote server, the remote server's remote sessions configuration determines what privileges to grant the user based on the user profile used to log into the remote server.

LICENSING

There are two types of licensing that apply when using thin clients with an I/A Series system:

- 1 I/A Series or FCS licensing
- 2 Microsoft licensing

I/A Series or FCS Licensing

- ▶ There is no specific I/A Series or FCS hardware license for thin clients.
- ▶ There is no specific I/A Series or FCS software license for thin clients.
- ▶ Existing I/A Series and FCS licensing still applies with regards to remote sessions. However, the license resides with the remote server NOT with the remote client.
 - For example, the I/A Series S10 license is required for any I/A Series server (physical machine or virtual machine). Within the S10 license, there is a selection for quantity of display managers being run on the I/A Series server. Since thin clients have the ability to access an I/A Series server and run one or more display managers, the S10 license for the remote server must include the correct quantity of display managers being used by thin clients.

Microsoft Licensing

- ▶ There are no additional Microsoft licenses required if a thin client is being used to access a remote server in a *one-to-one* relationship where there is only one single instance of the server being accessed at one time.
 - A *one-to-one* relationship is when the server is only able to be accessed via a user sitting at a thin client and using the thin client to invoke the server's desktop. In this situation, a user is not able to sit locally to the server to access it at the same time that it is being accessed by the thin client. If the user local to the server does choose to access the server, the thin client will no longer be able to access the remote server (i.e. the thin client client's monitor will indicate it is no longer connected to the remote server).
 - Please note that a single thin client can have multiple *one-to-one* relationships to different remote servers. For example, a single quad-head thin client could easily have four different *one-to-one* relationships with four different remote servers. In this example, it is likely that the thin client would display a different remote server on each of its four different monitors. However, a thin client is not limited to only four connections.
- ▶ There are additional Microsoft licenses required if a thin client is being used for connection to Microsoft Remote Desktop Services servers (formally known as Terminal Services sessions). These licenses are available in BuyAutomation in five license packs for both a "license per user" or "license per device" model.

Remote Desktop Services Client Access License (RDS CAL)

- ▶ Formally known as Terminal Services Client Access License (TS CAL)
- ▶ A RDS CAL is required for every remote session that connects to and displays applications running on a Remote Desktop Services server.
- ▶ I/A Series servers (V90, H90/P90, H91/P91) do not ship with any RDS CALs included.

Windows Server Client Access License (CAL)

- ▶ A CAL is required for every remote session that will be connection to a Remote Desktop Services server.
- ▶ A physical I/A Series server (H90/P90 or H91/P91) ships with five CALs included.
- ▶ An I/A Series V90 server virtualization host ships with a minimum of ten CALs included but may include more based on the particular V90 model code.

HP DUAL MONITOR SERIES THIN CLIENT

Base Configuration

The HP Dual Monitor Series Thin Client contains the following elements:

- ▶ AMD® processor
- ▶ One integrated DisplayPort 1.1a and one integrated DVI-I port - supports one or two monitors, digital only⁽¹⁾
- ▶ Integrated 10/100/1000BaseT Ethernet port
- ▶ Universal Serial Bus (USB) interface ports for:
 - Mouse
 - Trackball (optional)
 - Keyboard
 - Audio speakers (optional)
 - Touchscreens (optional)
 - USB Digital Color printers (optional)
 - External USB DVD drive (P0928GY - required).

Mounting Options

The HP thin clients can be either mounted:

- ▶ Vertically on a plastic base (supplied)
- ▶ Horizontally with four mounting feet (supplied) attached to one side of the thin client.

(1) Optional DisplayPort to VGA adapter is available but not recommended. The use of the VGA adapter can greatly degrade the performance of the system. The thin clients are not optimized for a mixed digital and analog or analog-only monitors.

FUNCTIONAL SPECIFICATIONS (HP DUAL MONITOR SERIES THIN CLIENT)

Processor Type

AMD® processor

Devices Served

VIDEO DISPLAYS (UP TO 2)

23-inch LCD USB Touchscreen Monitor

23-inch LCD Monitor

42.38 BTU/hour, idle state

4.74 BTU/hour, sleep state

3.00 BTU/hour, Off mode

(5) Heat dissipation is calculated based on the measured Watts, assuming the service level is attained for one hour.

HP QUAD MONITOR SERIES THIN CLIENT

Base Configuration

The HP Quad Monitor Series Thin Client contains the following elements:

- ▶ AMD® processor
- ▶ One integrated DisplayPort 1.1a and one integrated DVI-I port - supports one or two monitors
- ▶ Dual-head AMD video card - supports one or two monitors, digital only⁽⁶⁾ for a total of four monitors for this thin client
- ▶ Integrated 10/100/1000BaseT Ethernet port
- ▶ Universal Serial Bus (USB) interface ports for:
 - Mouse
 - Trackball (optional)
 - Keyboard
 - Audio speakers (optional)
 - Touchscreens (optional)
 - USB Digital Color printers (optional)
 - External USB DVD drive (P0928GY - required)

Mounting Options

The HP thin clients can be either mounted:

- ▶ Vertically on a plastic base (supplied)
- ▶ Horizontally with four mounting feet (supplied) attached to one side of the thin client.

⁽⁶⁾ Optional DisplayPort to VGA adapter is available but not recommended. The use of the VGA adapter can greatly degrade the performance of the system. The thin clients are not optimized for a mixed digital and analog or analog-only monitors.
