Multiple Contact Output (MCOU) Block

The Multiple Contact Output (MCOU) block is a multiple channel digital contact or Boolean logic output block for controlling contacts, alarms, status conditions, sequence steps, etc.

OVERVIEW

The MCOU block provides Auto/Manual control of up to 16 Boolean-type inputs that are addressed to the specified Fieldbus Module output points. A block-level initialization parameter is available for cascading the block state to other driving blocks.

STANDARD FEATURES

- Manual/Auto control of all points
- Bad Fieldbus Module detection
- Initialization state parameter (block-level)

OPTION

- Bad alarming
