

**Compact Power Supply - FPS480-24**

Front and Left Side View (RH101CR)

*The Foxboro Evo™ Process Automation System's Compact power supply provides 24 V dc to designated system loads such as FCP280, the Compact and standard 200 Series I/O subsystem equipment. The power supply is DIN rail mounted.*

**FEATURES**

- ▶ Wide range of ac and dc input voltages
- ▶ Extremely high efficiency
- ▶ Power factor correction
- ▶ Dual stage current limiting
- ▶ Overvoltage shut down circuitry
- ▶ Transformer isolated 24 V dc output
- ▶ Class 1, DIV 2, Zone 2 applications
- ▶ UL®, UL-C and CENELEC Certifications
- ▶ G3 rating for harsh environments
- ▶ Power for external field devices
- ▶ Convection cooling (no fans)
- ▶ Horizontal DIN rail mounting
- ▶ "DC OK" relay contact status alarm output.

## **OVERVIEW**

The Foxboro Evo Process Automation System's Compact Power Supply (FPS480-24) provides 24 V dc to system loads such as the FCP280, the Compact and standard 200 Series I/O subsystem equipment<sup>(1)</sup>. The Model FPS480-24 is a 480 W power supply that is ATEX qualified, and agency certified for use in Class 1, Division 2 and Zone 2 applications.

The power supply is designed primarily for use in the G13 System Enclosure and G14 System and Termination Enclosure for the Compact 200 Series Fieldbus modules and the FCP280 modules. It is available for custom configurations as well, provided that the proper power consumption and wattage requirements are taken into consideration.

## **WIDE-RANGE INPUT VOLTAGES**

A high-efficiency input circuit automatically accepts either ac or dc input voltages. The 120/240 V ac or 125 V dc input circuit provides a range of 85 to 264 V ac at 47 to 63 Hz operation, or 120 to 264 V dc, 108 to 119 V dc (derates to 90%), to meet world-wide power requirements.

## **HIGH EFFICIENCY**

The Compact power supply has exceptional efficiency (up to 94% at 230 V ac) resulting in high reliability and low failure rates. It has a return-on-investment (ROI) of less than two years based upon average electrical rates and load.

## **POWER FACTOR CORRECTION CIRCUITRY**

The advanced design for ac inputs provides an active sinusoidal current profile for near-unity controlled power factor.

## **CURRENT LIMITING**

The Compact power supply operates as a constant voltage source with maximum load ratings as listed in the specifications. If load current attempts to exceed 105% of maximum current at the rated 25°C load for more than four seconds, the output current causes the Compact power supply to shut down.

## **OVERVOLTAGE SHUTDOWN**

Automatic shutdown occurs if operating conditions cause excessive output voltage. After the occurrence of an overvoltage shutdown, input power must be interrupted to re-establish the output. After the cause of the shutdown has been removed, the shutdown circuit resets in less than 30 seconds after the removal of input power.

## **DIVISION 2, ZONE 2 APPLICATION**

The power supply is UL and UL-C listed (to UL60950-1 and UL508) and has IEC/EN 60950 certifications. It can be used in Division 2 and Zone 2 applications.

## **POWER FOR EXTERNAL FIELD DEVICES**

The actual amount of power required in a Compact 200 Series I/O subsystem depends on the number of Compact 200 Series FBMs, FCP280s, and other modules being powered, the types of termination assemblies used, and whether internal or external powering is used for individual field device(s).

The FPS480-24 can also be used as a field power supply to power external field devices and FCP280s. However, for system integrity, non-system loads should be powered from separate power supplies.

---

(1) Additional power supplies can be used for other devices requiring 24 V dc power.

## **PACKAGING**

The vented open casing with conformal coating allows for corrosion protection and high reliability,

The power supply has a DIN rail mounting bracket for mounting on a horizontal DIN rail.

## **STATUS ALARMS**

Visual LED indicators for undervoltage and normal operating voltage output are contained on the power supply.

To indicate when the 24 V dc output dips to < 80% of its output for longer than 1 millisecond, a “DC OK” relay contact output is available to activate an externally powered alarm. A customer-supplied cable is required to connect the normally-closed relay contact (with screw terminals) to an external FBM or other contact sensing device. A Compact FBM207b may be used for this purpose, for example.

## FUNCTIONAL SPECIFICATIONS

### Part Numbers (Cont.)

#### POWER SUPPLY TO BASEPLATES CABLES

Typically, the Compact power supply (FPS480-24) is connected to its Compact and standard 200 Series baseplates via a dc distribution assembly. This distribution assembly is used when more than two baseplate connections are needed. The following baseplate power supply cables and distribution assemblies are used:

#### *Power Supply FPS480-24 Cable to dc Distribution Assembly*

RH100DZ - 0.6 m (2.0 ft), 24 V dc, 14 AWG (Supports up to 20 A)

RH100EA - 1.0 m (3.2 ft), 24 V dc, 14 AWG (Supports up to 20 A)

#### *dc Distribution Assembly*

RH101BY

#### *Power Cable for Baseplates (dc Distribution to Baseplate)*

RH100EB - 2.1 m (6.9 ft), 24 V dc, 18 AWG

RH100EC - 3.0 m (9.8 ft), 24 V dc, 18 AWG

Alternatively, if the power supply connects to no more than two baseplates, the RH100EB and/or RH100EC cables may be used for direct connections to the baseplates.
