

# Foxboro Evo™ Process Automation System

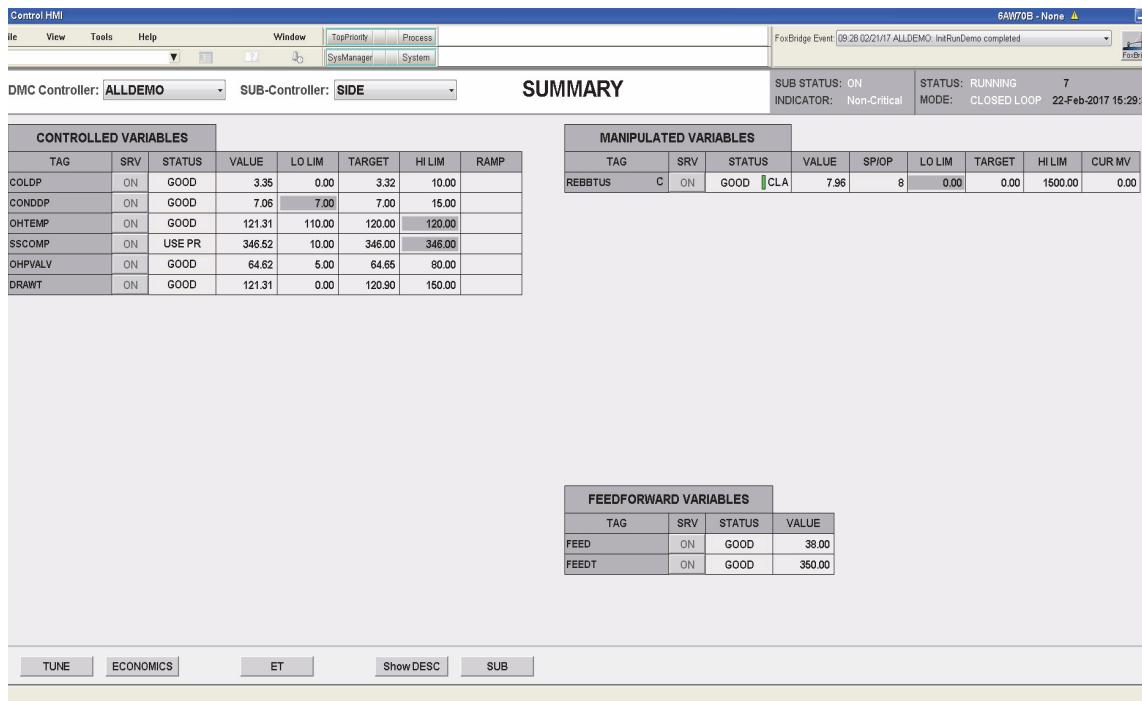

## Product Specifications

# Foxboro®

by Schneider Electric

PSS 31S-7FXBRDG

### FoxBridge Software

The FoxBridge software contains all of the functions and features to reduce the time to implement a Aspen DMCplus® or Aspen DMC3™ controller on a Foxboro Evo™ Control Core Services or I/A Series® workstation.

### OVERVIEW

The FoxBridge software provides a close coupling between Aspen DMCplus® and Aspen DMC3™ controller software and the Foxboro Evo Control Core Services and I/A Series software.

### Features

The FoxBridge software consists of the following items:

- 1 A FoxBridge Configuration Utility that uses an Aspen controller configuration file to build the corresponding FoxBridge components including

the required Application Objects software and controller displays.

- 2 An Application Object Services Utility that allows the maintenance of the Application Object Database as the model changes, creates the Application Objects, and maps the Application Objects to control blocks.
- 3 Two example controller applications, based on the standard 7x7 distillation column example, consisting of control blocks, graphics, and FoxBridge controller. The application, DMCPLUSUD, uses the Supervisory Control (SSC)

- methodology. The second application, ALLDEMO, is similar to DMCPLUSD, but has two subcontrollers with the subcontroller displays.
- 4** A Foxboro Tag Wizard for use with the AspentTech Build utility converts model files to controller configuration files.
- 5** The linkage between the controllers and the control system using two CIM-IO™ servers.
- CIMIO for OPC DA is dependent on the presence of AIM\*OPC DA or other OPC DA Server. It supports the display of message strings at run-time and modeling via the use of data collection.
  - CIMIO for FoxAOS uses the Application Object interface for all numeric data transfers between the Aspen controller and Application Objects.
- 6** An optional display interface that calls the local controller data collection and extraction programs for use during step testing.
- 7** Uses Microsoft SQL Server software for AOS data retention.

With proper application of these tools, an operating Aspen DMCplus or Aspen DMC3 controller can be linked to FoxView™ or Foxboro Evo Control HMI displays in a very short period of time.

- ▶ Application Object Services (AOS) software. (Ships with FoxBridge.)
- ▶ Microsoft ® SQL Server®. (Ships with FoxBridge.)
- ▶ AIM\*OPC DA or other OPC DA Server. (Sold separately.)
- ▶ aspenONE Advanced Process Control products V8, V9 or V10, which includes Aspen DMCplus, Aspen DMC3, Aspen APC Online and Aspen Cim-IO software for OPC DA. (Sold separately.)

## ORDERING INFORMATION

The FoxBridge software is licensed per station.

- ▶ Q0303BJ - FoxBridge Software
- ▶ Q0303BK - FoxBridge Software Upgrade

## REQUIREMENTS

FoxBridge v8.x software requirements are:

- ▶ v9.0 -v9.3 - Standard or Security Enhanced Control Core Services software with default domain group policies.
- ▶ v8.8 - Standard or Security Enhanced I/A Series software with default domain group policies.
- ▶ The FoxBridge product supports FoxView and Control HMI format Operator and Engineering Displays.
