Overview

Discrete inputs can be sensed across all the usual voltage levels found in industrial facilities. The Compact FBM207/b/c Voltage Monitor/Contact Sense Input Interface Modules use one of the several termination assemblies to match to the externally powered voltage level.

The Compact FBM207/b/c Voltage Monitor/Contact Sense Input Interface Module functions as a 16-channel dc voltage monitor (FBM207) or 16-channel contact sensor for 24 V dc inputs (FBM207b) or 48 V dc inputs (FBM207c). Each channel accepts a 2-wire input from a dc voltage source (FBM207) or pair of contacts or solid state switches (FBM207b/ FBM207c). Associated termination assemblies (TAs) support discrete input signals at voltages of 60 V dc, 120 V ac/125 V dc, or 240 V ac.

For voltages higher than 60 V dc, the TAs have additional signal conditioning hardware that provides voltage attenuation and optical isolation. It is part of the Compact 200 Series I/O subsystem. See *Compact 200 Series I/O Subsystem Overview* (PSS 41H-2COV).

The module is available in three distinct types, and each type with its associated TA supports discrete inputs, as shown below:

Compact FBM207	Provides voltage monitoring at: • 60 V dc • 120 V ac/125 V dc • 240 V ac Provides switch inputs with: • External 120 V ac/125 V dc • External 240 V ac
Compact FBM207b	24 V dc Contact Sense
Compact FBM207c	48 V dc Contact Sense

Each discrete input is galvanically isolated from other channels and ground, and group isolated when used with external excitation. The modules perform signal conversion required to interface electrical input signals from field sensors to the redundant module Fieldbus. In addition, they may execute programs for Discrete Input, Ladder Logic, Pulse Count, and Sequence of Events, with configurable options of input filter time.

The modules can be used as a single unit, or as a redundant pair. When used as a redundant pair, the modules combine to provide redundancy at the Fieldbus Module (FBM) level, with field input signals received from one common termination assembly through a redundant adapter affixed to the Compact FBMs' baseplate. The input current for redundant modules is doubled. A redundant digital input block in the Foxboro DCS control software validates each input in conjunction with information to/from the module, and selects the input with the higher quality for processing in the control strategy.

A redundant contact input function block, CINR, is used for each pair of inputs. The CINR block handles input reads and initialization logic for the redundant channels. On each execution cycle of the CINR block, identical reads are queried from each module, fully exercising the fieldbus and the logic circuitry of each module.

Figure 1 - Compact FBM207/b/c Redundant Module Configuration

B	Compact FBM207/b/c Redundant Adapter (RH101AZ)

Features

- FBM207 supports 16 discrete input signals at voltages of:
 - 15 to 60 V dc - voltage monitoring
 - 120 V ac/125 V dc - voltage monitoring or switch inputs
 - 240 V ac - voltage monitoring or switch inputs
- FBM207b/c support 16 discrete inputs:
 - FBM207b - 24 V dc contact sense
 - FBM207c - 48 V dc contact sense
- Each input is galvanically isolated, and group isolated with external excitation
- Single or redundant modules
- Compact, rugged design suitable for enclosures in Class G3 (harsh) environments
- Executes programs for Discrete Input, Ladder Logic, Pulse Count, and Sequence of Events with configurable Input Filter Time option
- Termination Assemblies (TAs) for locally or remotely connecting field wiring to the Compact FBM207/b/c
- TAs for per channel internally loop powered devices

Compact Design

The Compact FBM207/b/c's design is narrower than the Standard 200 Series FBMs, with a rugged Acrylonitrile Butadiene Styrene (ABS) exterior for physical protection of the circuits.

Enclosures specially designed for mounting the FBMs provide various levels of environmental protection, up to harsh environments (Class G3), per ISA Standard S71.04.

Visual Indicators

Light-emitting diodes (LEDs) incorporated into the front of the module provide visual indication of the module's operational status, as well as the discrete states of the individual input points.

Easy Removal/Replacement

The modules mount on a Compact 200 Series baseplate which is either DIN rail mounted or rack mounted horizontally, and includes signal connectors for redundant Fieldbus, redundant independent dc power, and termination cables. Two screws on each FBM fix the module to the Compact 200 Series baseplate.

Redundant modules must be located in adjacent positions on the baseplate, with the first module located in an odd-numbered position (for example, the positions labelled "3" and "4"). To achieve redundancy, a redundant adapter module is placed on the two adjacent baseplate termination cable connectors to provide termination for a single cable (see *Compact FBM207/b/c Redundant Module Configuration*, page 4). A single termination cable connects from the redundant adapter to the associated termination assembly (TA).

When redundant, either module may be replaced without upsetting field input signals to the good module. Each module can be removed/replaced without removing field termination cabling, power, or communications cabling.

Redundant Modules in Foxboro DCS HMI

The redundant pair of modules appear as two independent modules to system management software applications, such as Foxboro DCS System Manager, and System Manager/Display Handler (SMDH). The functional redundancy for these modules is provided by their associated control blocks.

Sequence of Events

The Sequence of Events (SOE) software package is used to acquire, store, display, and report events associated with a contact's change of state. System time is distributed to the FBM and the state change is marked with a precision of one millisecond. The contact signal may be passed through a debounce filter of variable period. System time is usually set by an optional master timekeeper receiving GPS time signals. This permits multiple control processors to be synchronized in time and therefore provide a consistent time basis for post-event analysis.

Refer to Sequence of Events in *Related Product Documents*, page 18 to learn more about this package, and to Time Synchronization Equipment for a description of the optional time synchronization capability. Also, for more information, refer to the section on "Timestamp Accuracy and Precision of SOE Data" in the *Time Synchronization User's Guide* (B0700AQ).

Fieldbus Communication

A Fieldbus Communications Module or a Control Processor interfaces to the redundant 2 Mbps module Fieldbus used by the FBMs. The FBM accepts communication from either path (A or B) of the 2 Mbps Fieldbus. If one path is unsuccessful or is switched off at the system level, the module continues communication over the active path.

Overcurrent Protection

Field power, for contacts or solid-state switches, is current limited.

Modular Baseplate Mounting

The modules mount on a DIN rail mounted modular baseplate, which accommodates up to 16 compact FBMs. The baseplate is either DIN rail mounted or rack mounted, and includes signal connectors for redundant fieldbus, redundant independent DC power, and termination cables.

Termination Assemblies

Field I/O signals connect to the FBM subsystem via 200 Series TAs. The TAs used with the Compact FBM207/b/c are described in *Termination Assemblies and Cables*, page 12.

Functional Specifications

Communication	Communicates with its associated FCM or FCP via the redundant 2 Mbps module Fieldbus.
Input	16 isolated and independent channels
Accuracy	Pulse Count No missing pulses for pulse rate 0 to 250 Hz
Filter/Debounce Time	Configurable (No Filtering, 4, 8, 16, or 32 ms)
Voltage Monitor Function - Input	- Input: - Logic One, On-State Voltage: 15 to 60 V dc - Logic Zero, Off-State Voltage: 0 to 5 V dc - Current: 1.4 mA (typical) at 5 to 60 V dc - Source Resistance Limits: - Logic One, On-State: 1 kΩ (maximum) at 15 V dc - Logic Zero, Off-State: 100 kΩ (minimum) at 60 V dc
Contact Sensor Function - Input	- Range (Each Channel): - Contact open (off) or closed (on) - Open-Circuit Voltage: <i>Compact FBM207b</i>: 24 V dc $\pm$15% <i>Compact FBM207c</i>: 48 V dc $\pm$15%
Short-Circuit Current	3.2 mA (typical)
Logic One, ON-State Resistance	1.0 k Ω (maximum)
Logic Zero, OFF-State Resistance	100 k Ω (minimum)
Isolation	Each channel is galvanically isolated from all other channels and ground. The module withstands, without damage, a potential of 600 V ac applied for one minute between any channel and ground, or between a given channel and any other channel.  DANGER HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH This does not imply that these channels are intended for permanent connection to voltages of these levels. Exceeding the limits for input voltages, as stated elsewhere in this specification, violates electrical safety codes and may expose users to electric shock. Failure to follow these instructions will result in death or serious injury.

Power Requirements	- Input Voltage Range (Redundant): 24 V dc +5%, -10% - Consumption: 5 W - Heat Dissipation: 5 W
Loop Power Supply Protection	Current limited at 3.2 mA (typical)
Field Terminations Functional Specifications	Refer to <i>Termination Assemblies and Cables</i> , page 12.
Calibration Requirements	Calibration of the module and termination assembly is not required.
Regulatory Compliance: Electromagnetic Compatibility (EMC)	<i>European EMC Directive 2004/108/EC (Prior to April 20, 2016) and 2014/30/EU (Beginning April 20, 2016):</i> Meets: EN61326-1:2013 Class A Emissions and Industrial Immunity Levels
Product Safety — Low Voltage Inputs	<i>Underwriters Laboratories (UL) for U.S. and Canada:</i> UL/UL-C listed as suitable for use in UL/ULC listed Class I, Groups A-D; Division 2; temperature code T4 enclosure based systems when connected to specified Foxboro DCS processor modules. Communications circuits also meet the requirements for Class 2 as defined in Article 725 of the National Electrical Code (NFPA No.70) and Section 16 of the Canadian Electrical Code (CSA C22.1). For more information, see <i>Standard and Compact 200 Series Subsystem User's Guide</i> (B0400FA). <i>European Low Voltage Directive 2006/95/EC (Prior to April 20, 2016) and 2014/35/EU (Beginning April 20, 2016) and Explosive Atmospheres (ATEX) directive 94/9/EC (Prior to April 20, 2016) and 2014/34/EU (Beginning April 20, 2016):</i> DEMKO certified as Ex nA IIC T4 for use in certified Zone 2 enclosure when connected to specified processor modules as described in the <i>Standard and Compact 200 Series Subsystem User's Guide</i> (B0400FA). For use in an enclosure suited for an ATEX Zone 2 classified area.
Product Safety — Termination Assemblies with High Voltage Inputs	<i>Underwriters Laboratories (UL) for U.S. and Canada:</i> UL/UL-C listed as suitable for use in UL/ULC listed Class I, Groups A-D; Division 2; temperature code T4 enclosure based systems when connected to specified Foxboro DCS processor modules as described in the <i>Standard and Compact 200 Series Subsystem User's Guide</i> (B0400FA). <i>European Low Voltage Directive 2006/95/EC (Prior to April 20, 2016) and 2014/35/EU (Beginning April 20, 2016) and Explosive Atmospheres (ATEX) directive 94/9/EC (Prior to April 20, 2016) and 2014/34/EU (Beginning April 20, 2016):</i> DEMKO certified as Ex nA IIC T4 for use in certified Zone 2 enclosure when connected to specified processor modules as described in the <i>Standard and Compact 200 Series Subsystem User's Guide</i> (B0400FA).
RoHS Compliance	Complies with European RoHS Directive 2011/65/EU, including amending Directives 2015/863 and 2017/2102.
Marine Certification	ABS Type Approved and Bureau Veritas Marine certified for Environmental Category EC31.

Environmental Specifications

	Operating	Storage
Temperature	- FBM207/b/c: -20 to +60°C (-4 to +140°F) - Termination Assembly - PA: -20 to +70°C (-4 to +158°F)	-40 to +70°C (-40 to +158°F)
Relative Humidity	5 to 95% (noncondensing)	5 to 95% (noncondensing)
Altitude	-300 to +3,000 m (-1,000 to +10,000 ft)	-300 to +12,000 m (-1,000 to +40,000 ft)
Vibration	7.5 m/s ² (0.75 g) from 5 to 500 Hz	
Contamination	Suitable for use in Class G3 (Harsh) environments as defined in ISA Standard S71.04, based on exposure testing according to EIA Standard 364-65, Class III.	

Physical Specifications

Mounting	• Module: The Compact FBM207/b/c mounts on a Compact 200 Series 16-slot horizontal baseplate. The baseplate can be mounted on a horizontal DIN rail, or horizontally on a 19-inch rack using a mounting kit. Redundant modules must be located in odd and even adjacent positions on the baseplate (positions 1 and 2, 3 and 4, 5 and 6, 7 and 8, 9 and 10 (the second 1 and 2), 11 and 12 (the second 3 and 4), 13 and 14 (the second 5 and 6), or 15 and 16 (the second 7 and 8)). See <i>Compact 200 Series 16-Slot Horizontal Baseplate</i> (PSS 41H-2C200) for more details. • Termination Assemblies: The TA mounts on a DIN rail and accommodates multiple DIN rail styles including 32 mm (1.26 in) and 35 mm 1.38 in).
Weight	• Module: 185 g (6.5 oz) approximate • Termination Assemblies: ◦ Compression Type: 127 mm (5.02 in) – 272 g (0.60 lb, approximate) 146 mm (5.75 in) – 317 g (0.7 lb, approximate) ◦ Ring Lug Type: 198 mm (7.78 in) – 400 g (0.90 lb, approximate) 216 mm (8.51 in) – 440 g (1.0 lb, approximate)
Dimensions - Module	• Height: 130 mm (5.12 in) • Width: 25 mm (0.98 in) • Depth: 150 mm (5.9 in) - Including baseplate connectors, 139 mm (5.46 in)
Dimensions - Termination Assemblies	• Compression Screw: Refer to <i>Dimensions - Nominal</i>, page 16. • Ring Lug: Refer to <i>Dimensions - Nominal</i>, page 16.
Part Numbers	• Module: ◦ Compact FBM207: RH101GC ◦ Compact FBM207b: RH101AF ◦ Compact FBM207c RH101GD • Termination Assemblies: Refer to <i>Termination Assemblies and Cables</i>, page 12. • Redundant Adapter: RH101AZ

Termination Cables	• Cable Lengths: Up to 30 m (98 ft) • Cable Materials: PVC or Low Smoke Zero Halogen (LSZH) • Termination Cable Type: Type 4 or Type 4H — Refer to <i>Table 2, page 15</i> • Cable Connection: 37-pin male D-subminiature
Construction - Termination Assembly	• Material: Polyamide (PA), compression Polyamide (PA), ring lug • Family Group Color: Dark blue - discrete • Terminal Blocks: Inputs - 2 tiers, 16 positions Excitation - 2 tiers, 4 positions
Field Termination Connections	• Compression Accepted Wiring Sizes: ◦ Solid/Stranded/AWG: 0.2 to 4 mm²/0.2 to 2.5 mm²/24 to 12 AWG ◦ Stranded with Ferrules: 0.2 to 2.5 mm² with or without plastic collar • Ring Lug Accepted Wiring Sizes: #6 size connectors (9.5 mm (0.375 in(.))) 0.5 to 4 mm²/22 AWG to 12 AWG

Termination Assemblies and Cables

Field I/O signals connect to the FBM subsystem via DIN rail mounted termination assemblies (TAs). Multiple types of TAs are available with FBMs to provide pass-through I/O signal connections.

The termination assembly can be used with a single Compact FBM207/b/c or with a redundant pair (two Compact FBM207/b/cs).

The DIN rail mounted termination assemblies connect to the FBM subsystem baseplate by means of removable termination cables. When used with a redundant module pair, the termination assembly is connected to the baseplate using a Compact FBM207/b/c redundant adapter (RH101AZ). The DIN rail mounted TAs connect to the redundant adapter by means of a removable termination cable.

The cables for both single and redundant configurations are available in a variety of lengths, up to 30 meters (98 feet), allowing the termination assemblies to be mounted as needed by plant design. Refer to *Termination Cable Types and Part Numbers*, page 15 for termination cable part numbers and specifications.

Discrete Inputs

Termination assemblies with discrete inputs for the FBM207 support sixteen 2-wire discrete input signals at passive low voltage levels of less than 60 V dc and active high voltage levels of 125 V dc, 120 V ac, or 240 V ac. Active termination assemblies support input signal conditioning for FBMs. To condition signals, these termination assemblies may provide optical isolation, current limiting, noise reduction, voltage attenuation, or optional terminal blocks to connect externally supplied excitation voltage.

Termination assemblies with discrete contact sense inputs support sixteen 2-wire discrete input signals at passive low voltage levels of +24 V dc for the FBM207b and +48 V dc for the FBM207c.

Low Voltage Discrete Inputs

The low voltage inputs (less than 60 V dc) use passive termination assemblies. Inputs for FBM207 are voltage monitor types. Voltage monitor inputs require an external field voltage source.

Contact sense inputs use the FBM +24 V dc or +48 V dc supplied to all input channels on the assembly, to wet field contacts.

A load may not be required for proper operation of the input channels. A diode may be required for a dc inductive load only.

Functional Specifications - Termination Assemblies

FBM Type	Input Signal	TA Part No. ^(a)	Termination Type ^(b)	TA Cable Type ^(d)	TA Cert. Type ^(c)

(a) PA (polyamide) termination assemblies rated from -20 to +70°C (-4 to +158°F).

(b) C = TA with compression terminals, RL = TA with ring lug terminals.

(c) Refer to *Table 1* for Termination Assembly certification definitions. To help avoid false tripping of ac type inputs, route long wiring or bundled runs to minimize coupling from adjacent signals and/or noise from heavy equipment. When possible, we recommend dc excitation of input circuits for runs greater than 305 m (1000 ft).

(d) Refer to *Table 2* for cable part numbers and specifications.

(e) Polyamide RL supersedes the PVC RL, which is not a RoHS part.

Table 1 - Certification for Termination Assemblies

Type	Certification
Type 1	TAs are UL/UL-C listed as suitable for use in Class I; Groups A-D; Division 2 temperature code T4 hazardous locations. They are CENELEC (DEMKO) certified Ex nA IIC T4 for use in Zone 2 potentially explosive atmospheres.
Type 2	TAs are UL/UL-C listed for supplying field circuits Class I; Groups A-D; Division 2 hazardous locations when connected to specified 200 Series FBMs and field circuits meeting entity parameter constraints specified in <i>Standard and Compact 200 Series Subsystem User's Guide</i> (B0400FA). They are also DEMKO certified for supplying field circuits for Group IIC, Zone 2 potentially explosive atmospheres. Field circuits are also Class 2 limited energy (60 V dc, 30 V ac, 100 VA or less) if customer-supplied equipment meets Class 2.

Table 2 - Termination Cable Types and Part Numbers

Cable Length m (ft)	Type 4, 0.14 mm²/26 AWG P/PVC^(a)	Type 1 LSZH^(b)
